

***BLOOD MEMORY SOCIETY***

**By D.A. Field**

What if you could inherit your ancestor's memories?

What implications would such an inheritance have on your life and society?

*August 1, 2017, Fernandina Beach, FL*—In D.A. Field's inaugural literary fiction thriller – *Blood Memory Society*, memories are not limited to your own life, but extend back in time through your ancestral lineage...creating not only brilliantly superior intellect, but searing recollections from the past.

Working from the factual premise that mitochondrial DNA is a powerful tool for tracing ancestry and is only passed to future generations on the maternal side, Field makes ample use of two scientific phenomena to weave this fantastic tale. The first is the usefulness of mitochondrial DNA in maintaining genetic information through the generations. The second is the well-documented existence of genetic memory, the way many life forms pass certain basic knowledge at birth to their offspring. Once thought to be limited only to reflex-like or instinctive survival skills, recent research points to much more sophisticated memories being passed on to offspring at birth.

Field introduces the idea of a genetic mutation causing inherited memories - Blood Memory - resulting in IQs never before seen in human history. Stemming from this biological transmission of memory starting in the 1600s, geniuses begin to accelerate the pace of human progress. In his tale, Field indicates that today, only a small number of females remain capable of continuing the genius intellect via Inherited Memory – and a conspiracy is bent on eliminating the source.

A fast-paced thriller, Field weaves a finely tailored strand of heart-stopping prose as we follow Field's protagonist, Dr. Will Dunbar, from the Bahamas to Washington, D.C, and through the Florida Keys, Atlanta, Mississippi, New Orleans and Malibu. Tapped for his expertise in reproductive medicine, Dunbar finds himself in the crosshairs of national and international secrets, intrigue and conspiracy. Book II, a sequel, is already in the works.

A doctor by day and an author by night, D. A. Field is himself a collector of memories.

Advance reviews of *Blood Memory Society* have earned Field a 5-star rating from *Readers' Favorite* and *Bestsellers World*.

“Dr. Will Dunbar practices reproductive medicine, an expert in his field, and is just preparing to take the enviable position as head of the department in the Mayo Clinic in Jacksonville, FL, when the call comes. It’s his former classmate from West Point and it is a matter of national security. Dunbar’s expertise is badly needed in Washington, so he races to get there. But what awaits him is far worse than anything he’d imagined — political intrigue, international conspiracy, and a secret government program. Coupled with family secrets, Dunbar finds himself betrayed and fighting for the safety of his love and for his life.

“*Blood Memory Society* combines the elements of sci-fi, adventure, and thriller genres to take you on a rollercoaster ride of a lifetime.”—*Readers’ Favorite Book Reviews, 5 Stars*

“The plot is deep and intriguing...The characters are well developed and their interactions are well structured and complete...this is a great read and one worthy of attention.””  
— *Bestsellers World, 5 Stars*

Field is just as committed to his successful periodontal practice and storytelling passion as he is to his family. His wife, son and daughter are his world. “I write because it’s an opportunity to vent my artistic side and my love of adventure,” he says. “I also wanted to do something that would involve my family and inspire my children.”

So how does someone who is a healer find himself lured to writing adventure, action thrillers with a little sci-fi thrown in? Expressing his sentiments through words comes naturally to Field. A musician since age 12, Field played in several rock bands and composed numerous song lyrics along the way, while successfully pursuing academic goals.

*Blood Memory Society* is being published by Giro di Mondo Publishing of Fernandina Beach, FL; it is scheduled for wide release through all major and indie booksellers starting Saturday, Sept. 23, 2017. Visit <http://www.dafield.com> – for his book tour schedule.

Book II, a sequel, is due out Summer 2018.
